

GAMMA IS CARBONNEUTRAL®

The UK's greenest
network operator

Gamma Telecom is a certified Carbon Neutral company, **helping businesses, the Public Sector and voluntary sectors reduce their carbon footprint.**

We are **the only network operator in the UK to have a net zero carbon footprint.**

HOW DOES IT WORK?

We've been independently assessed by Greenstone Carbon Management for our carbon output, taking into account all utility usage, business travel and waste across each site, as well as the electricity consumed by the network.

The total carbon output has been offset through investment in renewable energy projects.

Customers using any of Gamma's services are using a green service with a net zero carbon footprint. This provides channel partners with a great differentiator and can also open up further opportunities in the public sector in particular, where carbon reduction is a key objective.

WHICH PROJECTS IS GAMMA SUPPORTING?

Projects include the Aydin Geothermal Energy Project which uses geothermal energy to generate electricity at a renewable power plant in Turkey and a Biomass Renewable Energy Project which uses renewable biomass to generate heat for processing tea at nine factories in Sri Lanka.

BENEFITS

- Differentiator against the competition
- Can act as a deal winner as part of broader solution
- Opens up opportunities in the public sector where carbon reduction is a key objective
